

## RICH BLACK

When printing large areas of solid black on the fronts of full color cards and brochures we recommend you create a "Rich Black". Printing only 100% black may cause the black ink to look light or washed out. By printing with a rich black the black will look much richer. Your "Rich Black" color should be made up of :

60% Cyan, 60% Magenta,  
60% Yellow, 100% Black

Only use this rich black for large areas-  
DO NOT USE RICH BLACK FOR TYPE
